Seeing what we want to see

בְּרֵאשִׁית[a] בָּרָא אֱלֹהִים אֵת הַשָּׁמַיִם וְאֵת הָאָרֶץ׃

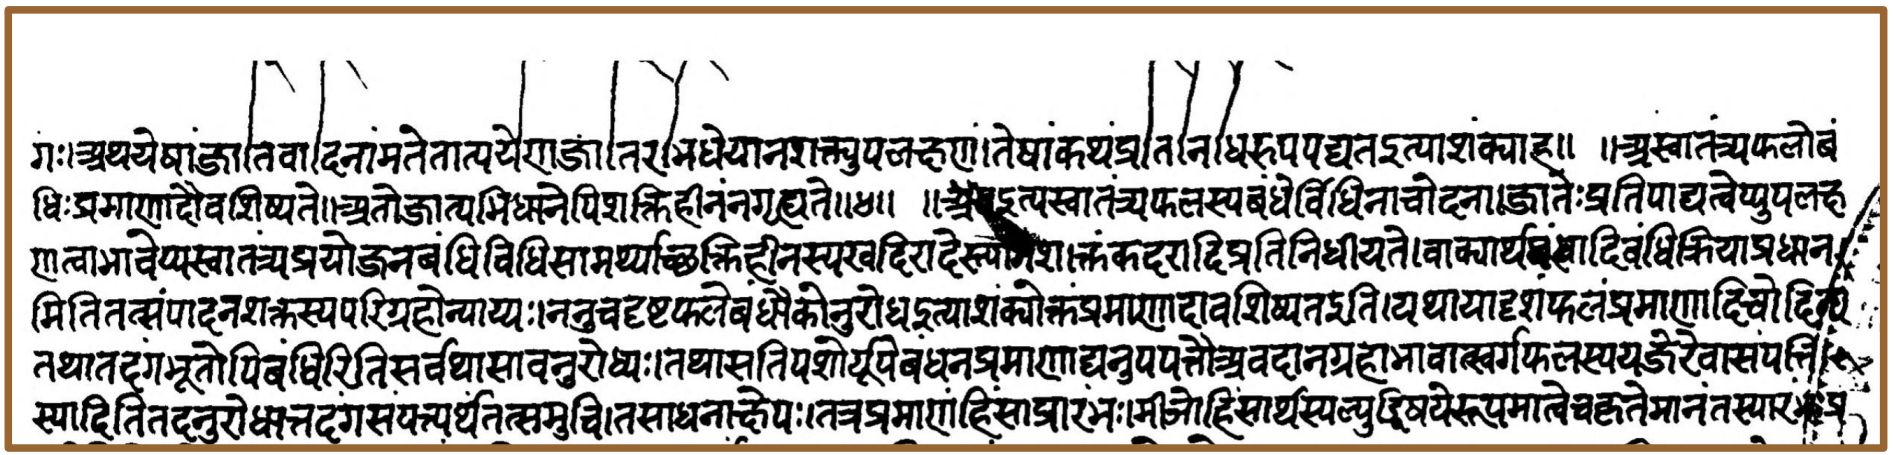

Biblia Hebraica Stuttgartensia, 1.

One day he did not come to the midday meal, although he was called. His wife waits longingly, looking at the food.... Finally she resolves to go over to his room and exhort him to come.... He is absorbed in his oriental studies.... "Well, my girl, there can be no question of dinner, here is a vocalization I have never seen before.... Look at this dot here! It is enough to drive one mad."... "Is that anything to take so much to heart? It is not worth wasting one's breath on it." No sooner said than done. She blows, and behold the vocalization disappears, for this remarkable dot was a grain of snuff. Joyfully the scholar hastens to the dinner table, joyful at the fact that the vocalization had disappeared, still more joyful in his wife.

Søren Kierkegaard, trans. Oden 1978, 126.

Draughtsmen who knew no Greek were hired to transcribe them, so that they would copy only what they saw, without being tempted to write what they thought the Greek should be, or to fill in lacunae.

I have found such manuscripts to be very incorrect.... There is not a single seat of ancient Sanskrit learning in these Provinces.... In other parts of India Sanskrit learning is dying or dead; here it never existed, and is not likely now to commence.

Gough 1878, 204.

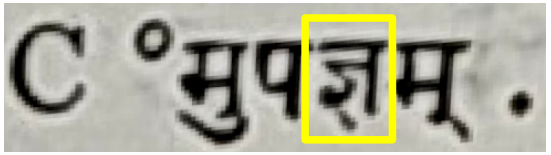

...the Bombay Government once again in 1903 A. D. deputed Professor Śrīdhar Bhandarkar to visit Central India, the Central Provinces and Rajputana. But fearing "that few Sanskrit manuscripts were likely to be found in these Central Provinces which almost were wholly wanting in a literary class" he did not set his foot there.

A map *is not* the territory it represents, but, if correct, it has a *similar structure* to the territory, which accounts for its usefulness.

Korzybski 1958, 58.

As the issue is merely one of linguistic structure, it is enough to train children to abandon the ‘is’ of identity, in the habitual use of a *few new terms*, and to warn them repeatedly against the use of some terms of antiquated structure.

Korzybski 1958, 63.

...the TEI standards proved to have some drawbacks, and during the Cataloguing process we soon realised that in some cases they needed to be adapted to provide a better description model for South Asian manuscript material.
