https://archive.org/details/kTKc_amar-kosh-of-amar-simha-manu-02-04-322-lal-bahadur-shastri-sanskrit-university/

This manuscript of the *Amarakoṣa*, or *Nāmaliṅgānuśāsana*, starts from the beginning of the text and breaks off in the middle of the vanauṣadhivargaḥ of the second kāṇḍa. Apart from the main text, there are at least two hands that have annotated the text, creating a layered commentary.

Take the first verse as an example (folio 1v):

5 8 9 7 6
yasya jñānadaẏāsiṃdhor agādhasyānaghā guṇāḥ

3 10 1 2 11 12 13
sevyatām akṣaẏo dhīrāḥ sa śriye cāmṛtāya ca || 1 ||

One hand, writing in red, has written numbers above the words of the verse, reordering them to show the grammatical structure of the sentence; the number 1 is written above “dhīrāḥ”, indicating that it should be the beginning of the sentence. The scribe has also added a number of glosses, in the kathaṃbhūtinī style (Tubb & Boose 2007, 149ff) to connect the words. This is where the missing number “4” is, next to the annotation “saḥ kaḥ”, which should be read before word number “5”, “yasya”. If we read the annotations along with the word order suggested by them, the resulting commentary would look like this:

> he dhīrāḥ | saḥ bhavadbhiḥ sevyatām | saḥ kaḥ yasya guṇāḥ anaghāḥ | kathaṃbhūtasya jñānadaẏāsiṃdhoḥ | punaḥ kathaṃbhūtasya agādhasya | kathaṃbhūtaḥ saḥ akṣaẏaḥ | śriye cāmṛtāya ca |

A different hand, writing in black, has added a further gloss on the last pāda of the verse:

> cadvayaṃ ubhayoḥ prādhānyadyotanāya

More elaborate versions of this kathaṃbhūtinī commentary can be found in the *Ṭīkā* of Kṛṣṇamitra as well as in two manuscripts held at DAV college: MS nos. 3347 and 3351.

When Baron Schilling de Canstadt paid a visit to the temple at Subulin, in Siberia, the Lamas were just occupied with preparing 100,000,000 copies of [a] mantra to be put into a gigantic prayer-cylinder. His offer to have the necessary number executed at St. Petersburg was most readily accepted, and in return for the 150,000,000 copies he had made, printing from rollers, and sent to them, he was presented with an edition of the Kanjur (a vast compilation of "translations of the Commandments" of the Buddha), the sheets of which amounted to about forty thousand.

Heron-Allen, Edward (Necromancer to ye Sette of Odd Volumes) 1931, 38.

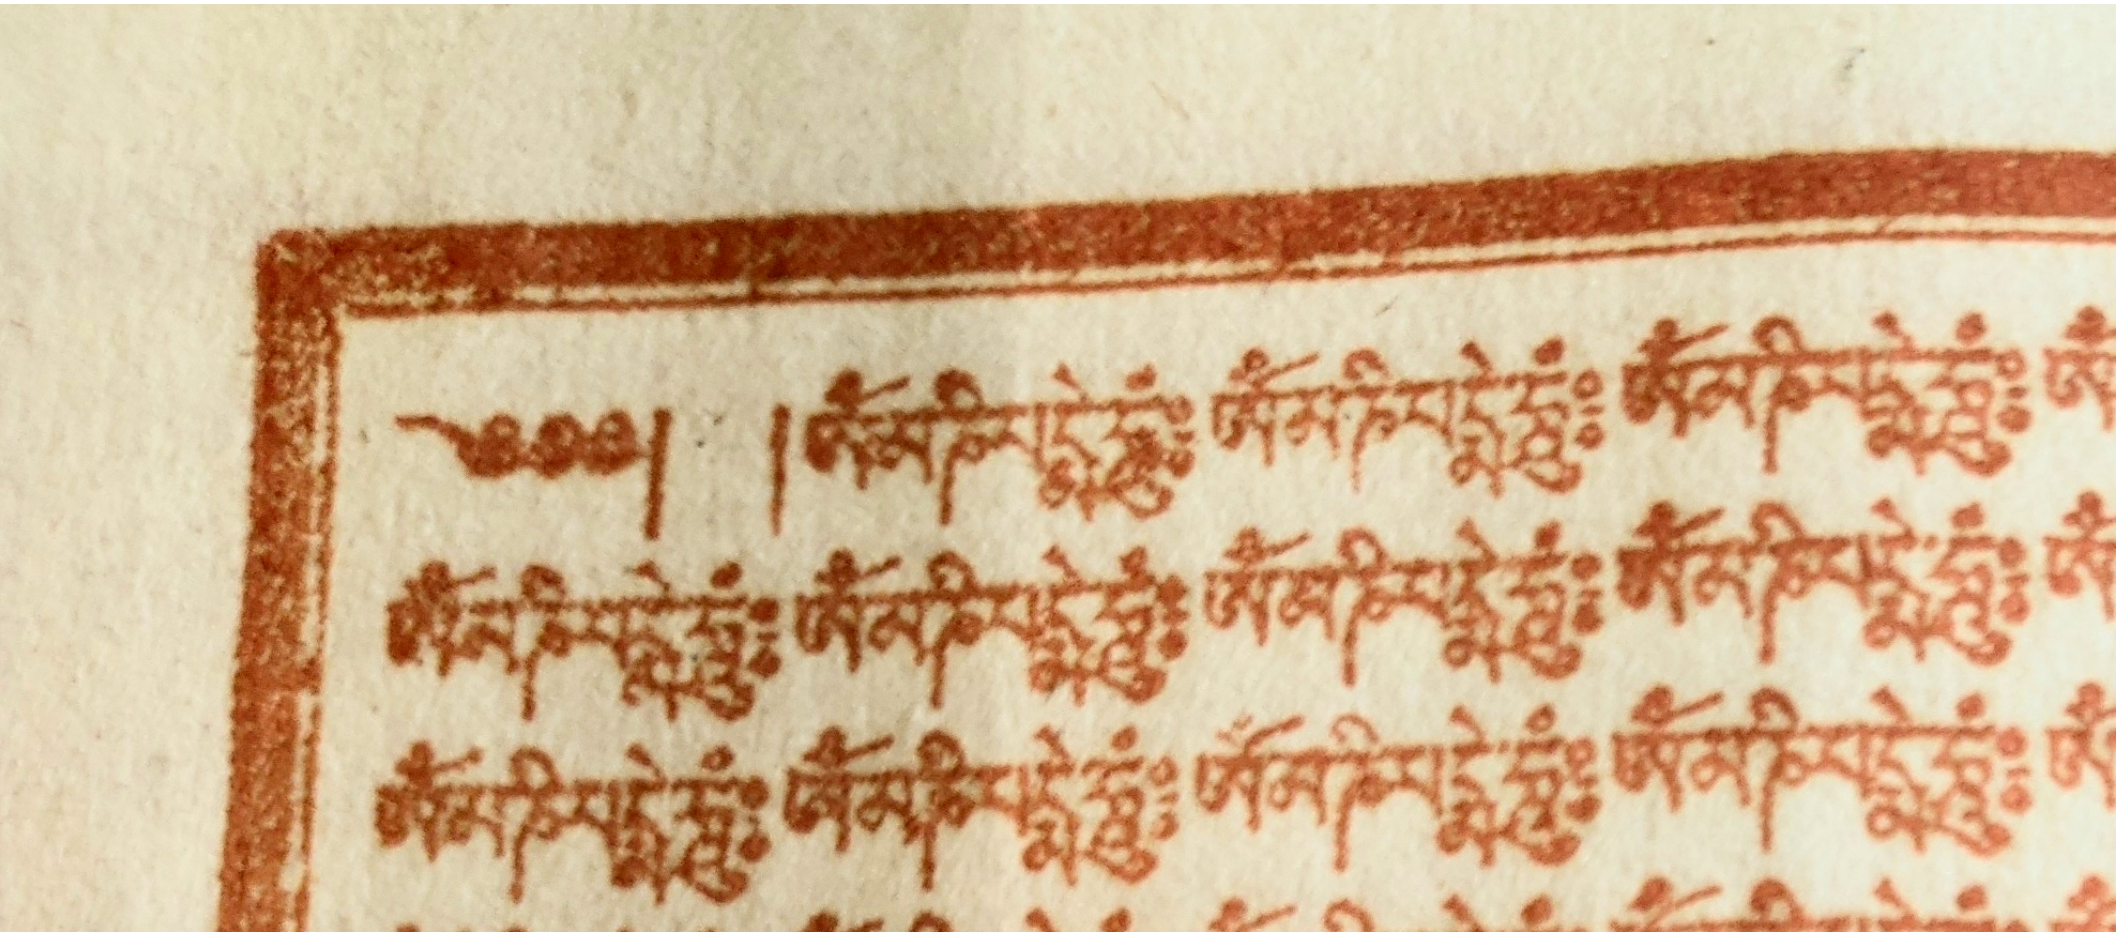
41 x 61 = 2501



BnF Sanscrit 1100, *oṁ ma ṇi pa dme hūṁ*.

2501 – 1 = 2500

2500 x 60 000 = 150 000 000

2501 is a **semiprime** number.

i.e., 2501 = 41 x 61 or 61 x 41.
